

This week, besides reading the book “The Beauty of Mathematics”, I coding the VAUD project.

1. Reading the book (4-12chapter), and doing the reading notes.
 - a) Hidden Markov method uses the characterization external to infer the node which are hidden.
 - b) Using simple and effective method when start the project.
 - c) Page-rank which used the probability theory.
2. Coding the VAUD project.
 - a) Coding the node structure.
 - b) Coding the query method.
 - c) Dividing the data structure of node into two types, as well as the CSS file.
 - d) Coding the two node js file respectively.

Next week I will work on doing the research on Spatio-temporal database and considering how to achieve the STC in it.
